

GMT20260504-215729 Recording 1920x1080 (1)

Yo, you said six, right? Or was it a six? Okay, cool. Just want to make sure my brain got it right. Yeah.

All right. Thanks. Yo, can you hear me? Can you hear me? I can hear you now.

And unfortunately, I can see you too. Let me do a co-host again so we don't have that issue with the whatever problem we had last time. Let me get a mouse on here.

Goddamn thing. All right. Let me share my screen.

Yeah. It's weird. It didn't say recording like it did last time.

Let me get off this and send you another link because I don't know why it didn't say recording. And it doesn't show it's recording anywhere here. Wait, what's this? Hold on.

Oh, recording to cloud. Okay. Okay, cool.

You want to make... That's me on your screen. Got it. Okay.

I got confused there. I saw like four of me. I was in love.

Can you still hear me? I can't hear you. I can't hear you. Unmute your shit, dude.

Can you hear me now? Yeah, I can hear you. You couldn't hear me and my mute button was grayed out. Oh, that's weird.

You're a co-host so you should be able to do anything. I have no idea. Yeah.

And unfortunately, I tried to put you on my... Okay, let me try to connect this. On a different screen or something? No, on my speaker. The speaker on this computer sucks.

Got it. All right. Okay.

So, what I told you last time... Hold on. You got to make it full screen on your end so I can actually see what the hell you're doing. Close that out.

Full screen. No, that's pop out. Is there a full screen button on here? There should be.

Yeah, right over there somewhere. I just found it. Hold on.

There we go. Okay. And do you see this? Your screen sharing shit? Yeah, it says you're sharing a screen.

Yeah. I don't know why it's showing in the middle of the screen but all right. Whatever.

Oh, better. Nice. Yeah.

All right. You're still not full screen though. I'm as full screen as I can get.

I'm full screen on my side. Okay. Let me just see.

Do I have any options here? The fuck? Usually, it just automatically pops up full screen. JC screen. Oh, here we go.

Hold on. Let's see. No, let me... Yeah, I'm at a full screen because in order to do what I'm going to need to do, I'm going to need to be able to see.

What I can try to do is I'm going to hook up another screen here. Hold on. All right.

That's better. It's not great but it's better. I don't know why this is duplicating.

It's supposed to be doing a second screen. Will you be able to see both screens? I don't know. Give it a try.

You should be able to. It depends on your end, not on mine. Zoom supports multiple displays but... Extend these.

Keep changes. Hold it. I got to make one more change.

Otherwise, I'm going to lose my mind here. No problem. I'm already there so... All right.

Hold on. You're going to go smaller again. I'm going here.

Display settings and I'm going to change them. This way, I just go from one screen to the next without... To be perfectly honest with you, the audio is more important than the video anyway. Okay.

As long as you're saying everything you're doing, you know what I mean? Okay. Tell me exactly what you want me to do here. Okay.

I'm going to look at my little checklist for Johnny. Okay. First question is, what actually matters? What's the one thing on the site that actually matters to you? All right.

It depends what the site is doing. In other words, if I'm looking for data, if I'm looking for a case, I want to be able to describe to the website or to that program, that interface, as succinctly as possible what it is I'm looking for. I'm looking for a case involving a mechanics lien, a cause of action to foreclose that mechanics lien, and somebody is demanding that I remove a list pendants.

The defendant is demanding I remove a list pendants. Do they have the right to do that? What I

want to be able to do is just put that succinctly into the browser or to the application and have it rip through cases that has those points. It would have to be intuitive enough to look for.

The first thing it should do basically is ask, where are you? And where is the case? Because that's important. So once you tell them I'm dealing with a case in New York, Supreme Court, New York County, that tells everything about it. Or if it should say, I'm in New York, first department, New York, second department, that tells a lot about everything.

That immediately, it catalogs where you need to begin to look for the data that I'm going to need. So if I'm doing a case in Kings County, I'm in the second department, your program should be intuitive enough to know that you can go sideways. You can look for the particular court you're in.

If there is no higher ruling, like I explained last time, if there is nothing higher from the second department, then I can look to other departments in New York for law. If there's nothing there, I can look to the appellate court of appeals. Everything works its way down, downwards.

So if there's nothing in the court of appeals, I can look for any department. If there's nothing in my department, then I can look to the other three departments. If there's nothing there, then I can look for Supreme Court.

And you work your way backwards that way. But if I put in mechanics lien, cause of action to foreclose mechanics lien, and then, you know, defendant demands removal of list pendants, there should be cases thrown back at me that have those parameters that would allow a defendant to demand a removal of a list pendants. That's important to be able to quantify that.

So in other words, if I have an issue, I need, I need to find case law to back up my issue. What I currently do now is with this, I do it on withhold quotes. So I will generally type something out, copy it and dump it into Westlaw and see what I get from that.

So I'll show you an example. I'm going to sign on to Westlaw now. So Buitwarden was hacked last week.

Two weeks ago, I think. Did they get a lot of data? Isn't the data up there? Don't they scramble it? Yeah. Yeah, but you're talking about serious machines going in decrypting stuff.

And now they're talking about instead of another 10, 15 years for quantum, they're talking about another three or four, which will completely destroy the banking system, the crypto system, the everything system. Well, it's going to have to become a much different way of locking people out. Yeah.

And that's what it's going to be. I mean, it's going to have to be more and, you know, it's going to have to be a lot more secure. Yeah, absolutely.

You need quantum defensive for quantum offensives, you know. I mean, the way these large

companies handle things, it's a joke. Yep.

That's why all your shit is online everywhere. Because the data leaks are outrageous. Yeah.

Well, I mean, in a way that's actually helpful because if it was a small little universe of leaks, then they would be able to concentrate for the individuals. Now it's six billion. So your odds of getting tagged are lower.

It's actually not. I hate to say it, but it's not. It's because they're generic.

They just go through the lists. They filter afterwards, big, small companies, individual, whatever. But right now it's just like, you know, whatever, a shovel, whatever they call those big tractor shovels, just grabs everything from everybody.

You know, I can't see your Westlaw screen, right? You can't see that? No. So you can't see my second screen at all? No. All right.

Well, let me do it over here and then I'll move it over to where you are. If I bring it here, can you see it? I still don't see it. Now? No.

All right. Let me rejoin it with this. I mean, you can just talk your way through what you're doing at Westlaw too.

That's fine. Okay. All right.

So what I'm doing right now is I'm on the Westlaw edge site, the general search. And what I'm typing in here, I'm going to type in, I have a case in Kings County that I have a case to foreclose a mechanics lien in Kings County. The defendant is demanding that I remove the list pendants.

Can, I'm going to change that. Do I have to? Now a list pendants, and I'm not trying to talk down to you. I just don't know if you know.

I don't know what the hell it is. So go for it. All right.

When you do a foreclosure on anything or you do anything, which is going to affect title on a piece of property, one of the first things you do when you file your complaint, immediately you file a list pendants, which is also called a notice of pendency. It is noted. It puts everybody in the world that there's a lawsuit that's been commenced, which may affect title to this property, which pretty much shuts down the ability of the person who owns the property to move the property.

Okay. And you get a judgment. You can go after that person because they knew it was there.

Right. All right. I'm going to look to see what I get with that search.

What exactly did you search again? I don't know if I heard. I searched the phrase. I have a case

to foreclose a mechanics lien in Kings County.

Defendant is demanding that I remove the list pendants. Do I have to? And it came up with 48 cases on it. Some of them are now this is what I mean about this is a little bit of a weird issue.

This is not something that I just made something up here. Okay. In the event you get a guy who's not confident in doing mechanics liens, you can demand that somebody remove a list pendants.

But in order to do that, you would actually have to bond the lien in order to get the lien removed. And then I have to remove the list pendants. If the list pendants is expired or improper, I can demand that they do it, but they'd have to show me that it's improper or done incorrectly.

The results I'm getting here now, I told that it's in King County, which is the second department. It's giving me cases here from Bronx County, New York County, first department. Another first department case, one from Nassau County, which is second department.

Queens County, which is second department. Third department case, so hopefully if I look at one of these, I'm going to go to the Supreme Court case. And why does that matter? Because the Supreme Court is whatever their rule of whatever decision was is more important than.

Well, again, this is the way in our system of law, the way it works is the higher court rules everything below it. Then the court right below that one. So in other words, if I'm in right now in the Suffolk County, if there's nothing in Suffolk County, no rules or no cases that pertain to what I'm doing, the judge can pretty much do whatever.

And there's no cases here. There's no cases above them. The judge can do whatever he wants.

Now, if there's another judge within the courthouse, which ruled on the same issue, the judge could use that ruling and apply it to this case, but he doesn't have to. If there's another Supreme Court within our anywhere, that judge could also take that ruling, apply it. If there is a case from the second department, that judge has to follow whatever that ruling is and has to follow what the second department said about that.

If not, but there's a ruling from the first, third, or fourth department, that judge could apply that ruling as long as there's nothing in the second department, second department rules below. And then above the second department, the appellate court in New York state rules everything. So if the appellate court and the, um, the court of appeals is ruled on an issue that applies to every court in the state, nobody can do anything different other than what they said.

So what I'm looking for here, and again, it's kind of like a wishy-washy issue. I didn't, wasn't one of the reasons why I did that was hopefully I was going to find a different, you know, amount of cases here, but when you're trying to build something, um, if you can't find anything that's point dead on that you can use and you can go, well, this is controlling, you look for anything that will support what you want it to say. What I, so if I, if I'm looking through one of these cases and I see

a quote, a quote that really is good and favorable to me, I will highlight that quote and I will go either to Westlaw or I will go now to one of the chat robots.

I will use, um, chat GPT. I will use the other one. I will even dump it into Google and see what they come up.

And I will say, I will search this exact thing. I will write, can you find me a second department case that supports this preposition? And I will put it in quotes and send it out. And a lot of times one or multiples of them will come up exact with a quote or something close to what I need.

I'll go back, I'll read the case, check it, and then I'll use it if need be. Because what happens is as I'm writing something sometimes, right, I'll be sitting down and I'll write something and it sounds good. You know, the fact pattern or whatever else, but I may not have law to actually back it up.

So I need to find it. I'll do it through Westlaw. I'll throw it through one of the bots and see if I can find something to support it.

And will you find enough to win your case or no? If I find enough authority that matches closely enough to what the argument is I'm trying to make, then yeah. I mean, the motion I had two weeks ago that I did, we had a, whenever you do work as a contractor on a piece of property, what the way it works is your contract, generally the way contracts and doing any kind of construction work, the owner of the property engages the general contractor. So there's a contractor between the owner and general contractor, and then the GC turns around and engages a bunch of other trades to do work.

So when you are looking to get paid, you go to the GC and you say, I need to get paid. If the GC doesn't pay you, you can turn around and place a lien on the property. But generally what's going to happen is the owner of the property, if they're smart and have actually paid everything, will turn around and say, I already paid.

And by the way, his contract isn't with me, it's with the GC, leave me out of it. So you kind of lose on that point. And that's exactly what the owner here did.

What I did was I went through all the payments that we knew of and showed that there was still money outstanding. So even though directly I didn't have anything to hook on to the owner, I was still able to grab onto the owner because there was an amount of money. It wasn't super large, but it was large enough.

It becomes what they call part of the lien fund. So if \$500,000 of work was done on the property and the owner only paid \$100,000, there's still \$400,000 in the pot that needs to be put in by the owner. It doesn't make any difference who it goes to, the owner has to kick it in.

So when I put the lien on the property, the owner was saying, this lien is improper, it has to come

off. I've already paid my bills. On the basis of what I found, I was able to show that there was a lot more work done than this owner actually paid for.

So there's money still outstanding. So I am entitled to my lien. So this is kind of how I did it.

And I went back. The way I also did it was I went and searched lien fund and a few other things. And then when I got my rough outline of what I was writing, I plugged it in to chat and also to Claude and basically wrote out what I was trying to do.

But I also gave them the motion papers and my portion of the response. I let it chew it through and I told each one of them, I need a 7,000 word opposition utilizing this, adding what you think is appropriate. And chat did a shitty job.

Claude did a very good job of spitting it out. I also sent what after I had written it, I had also given it to both Westlaw and also to Lexis Nexus to do it, to see what they came up with. So you have each of those things.

Did you take a look at the Lexis Nexus site? Not yet. I've been going blind trying to do this stuff. I don't think you're going to get a chance to.

You can try to log on tonight. But my trial was scheduled to end, I think, yesterday. It might be until today.

The guy wrote, I think he said it'll be on to the 4th. I'm not 100% sure, but feel free to log on to it. I have a meeting and I told you Westlaw never sent me the trial.

So I told that guy to go pound sand. So I have a meeting with Lexis Nexus tomorrow morning and I may sign up for that. I'm still not 100% sure whether it's worth it or not.

But after I got back, I had my version of the motion, of the response, and I had Claude's version of the response. I had Westlaw and Lexis Nexus. I kind of dismissed out of hand Westlaw's because I didn't particularly think it was very good.

But the Lexis Nexus one was kind of full. It brought up a few points that I didn't think of. And I had, I went through and I picked the points from all of them that I thought needed to be in the final version of it.

And then I fed it through, it was Claude and I told Claude to combine them. Take the important points from, because the one thing about Claude, it remembers what you fed it from before on the same thing. So I fed that and I, with the understanding that I'm opposing that document, I need to create one document here that grabs everything important.

And it filled it out and it did a reasonably good job. I mean, there were things in there that I had to change. There were things in there that were wrong.

It misinterpreted some of the facts, but by and large, it did an okay job. So if I'm able to feed in documents that I need to answer to one of these things and get a reliable outcome, that's the end of the game. Well, let me ask you a question.

When you say a reliable outcome, are you talking about like 90% reliable where you're going to go over it anyway and make sure you add in, you know, some polish or whatever, or you want it done, done, like you don't even have to look at it? I mean, I'm sure you look at it anyway, so. I don't think you'll find a lawyer on the planet, well, except for that one guy who would ever turn in anything without making sure. Today, I was fucking around with something.

I was submitting a reply and I was changing things around, and I asked it to just clean it up a bit. And I noticed it changed a few things. Which platform? This one's to Claude.

And Claude spit it back. And again, what I do, no matter what, I take what I get and I feed it through Westlaw. And the reason why I feed it through Westlaw is because Westlaw will take that and I can show you how that happens, or I can give you my password.

Westlaw will take that, read it, and pull every one of the cases out of there. And we'll look at what I've quoted from that case to make sure my quote is accurate. It will also go through to see whether the case I've cited is still valid or whether it's been overturned.

Mm-hmm. So when I get that report, I go through and then what I do is on Westlaw, I could also build every one of those cases. So I could have Westlaw pull and give me the complete thing on every single case.

And I do that. And then what I do is I go through the entire document and I read it, obviously. And then there are things that need to be done.

There are also points that need to be added. For example, when I was going through it and I was reading what I was preparing to send, I realized that as I'm reading it and going through it again, I realized that the defendant was citing the human rights law of New York and was trying to correlate that the actions of my client violated the civil rights. And essentially trying to state, and I didn't catch it the first time when I was reading through this or the second, but just the very filing of this action violated the civil rights.

And then once I read that, I realized this is idiotic. Filing a complaint alleging bad acts on the part of a person has absolutely nothing to it. So I rewrote that and I changed it and I added it and said just that, that just because somebody files a complaint when you have a neighbor which is racing cars up and down the street, revving engines at high volumes day and night, leaving trash out, this, that, and the other thing, this has absolutely nothing to do with a personal sexual orientation.

So I caught that and again, finally, and none of the other things that I had read it caught that. So I added it. But what I also do is I also go through and verify every single case.

I check them against the quotes and I have all the cases there. So I go through, I reread it. I make my notes where the area that I quoted on, and I make sure my quote is 100% accurate.

I also make sure my site is 100% accurate. And in doing that, when I was going through it, I found that two of the cases that Claude cited didn't exist. Now there was no, well, so when I was reading it, what it had written actually kind of made sense.

So I copied it. I went back and I found a case that actually did support that. So all I had to do was go back and change and from the case that didn't exist to the case that really does exist.

And again, I pulled that case, made sure it matched and everything else. Where did you pull that from? Where did you find the right case? Google. Okay.

You got to use what you got to use. Yeah. Yeah.

I just threw it into Google. I need a case that second department case that supports this preposition proposition. And it grabbed me a bunch of them.

Interesting. So it's kind of how I do things. Now, like I told you, if I have a motion, I'm facing a motion or pretty much motions.

If I'm able to take that motion paper and provide enough facts to whatever program, put in a copy of the complaint, if necessary, some of the relevant papers, along with the motion papers and tell it, I need opposition, I should be able to get something of reasonable quality that I can work with. And that will, the stronger the product coming out and the less fucking around with it that you need to do better. And to the point that I was making what I would do is help the lawyer out at the, at the end of this.

So whatever it is that actually that AI actually creates in the form of a document that may be used either as an outline for whatever he's going to write or actual print, you know, some print out and submit at the end of that document. If you put an authority's list there that, you know, indicates that these cases, you know, are verified, or if there's a case there that, you know, you're not sure of, in other words, the stronger, the quality of case that you have, that authorities that you have that they can rely upon, the better off you are. And if at the end of that thing, you would also attach each one of the cases, or at least a PDF of it, you know what I mean? So they could just pull it.

They don't have to fuck around. Case comes out, all the authority is there. They can go back, verify, double check it.

And instead of having an interim step. Okay. So let me ask you, if you were writing this app, what's the first thing you would, I guess, attack, or I don't know how to put it, but what's the first hurdle that you would want to see on legal AI or server death or whatever? All right.

The, again, the most important thing is having confidence in whatever output I'm getting. So if I'm getting something which is going to make my life easier and cut down the amount of time that I need to spend on doing things, if I can rely upon it more, and then basically utilize that as a study guide. So in other words, if I need to walk into a courtroom and argue this motion on my client's behalf, I may not be writing the brief, but I'm going to use whatever the brief and affirmation and everything I got as a learning guide or something, you know, to tutor me going in what my argument is going to be.

Okay. Makes sense. If I'm getting something from a source, like right now, if I got something from, if I, if I threw paperwork into chat GPT and I got anything back, I'm going to assume that 99% of it is crap.

And back in last summer, I told you I was getting, I was preparing to, I was writing up my brief. I had made it, I had appealed an issue up to the second department and I had to write a brief and I'm trying, I had written, I started writing this thing and I had written four or five versions of it and all of it seemed flat and stupid. And finally I was, I was hitting a wall and I couldn't think of anything beyond the basic shit, which I would have turned in a brief literally that was like a page and a half.

And sometimes, believe me, sometimes brevity is great, short, sweet, concise to the point judges would appreciate it. But when you're writing a brief, it has to, you actually have to develop your arguments. And I was getting stuck.

And I forget who I had heard. I, you know, I had obviously had heard of chat GPT and all of this. It was Abby was telling me that she was doing something and she threw it in there to get results that kind of like the scrambled.

She, she was writing things and doing it kind of in a note-taking kind of way. And then she, she threw it in there and it basically aligned everything in order, gave her this like sterling outline. She says it works great.

So I don't know if it was chat or one of the others, but that's why I decided to try it. And the first thing I tried was chat and I was really very unimpressed. And then I had heard of Claude.

So I went to Claude, I looked it up and I tried it on that and Claude sent me back like 17 pages of reasonably thoughtful things that I think I had told you this points that I would have never even have thought of. Yeah. So it, it opened my eyes and it kind of opened the floodgates.

So I took what Claude gave me and I ran with it, bent it, changed it, use some of it, but I was able to do what I needed to do. And it kind of unlocked the logjam. So that's it.

Let me ask you, what is it about Westlaw and LexisNexis that don't give you what, why don't they give you what you need? When I first, Westlaw, when I did it, you have Westlaw's version of, do

you have it in front of you, what I sent you the other day? Let's take a look, open up, see if you can find what the Westlaw thing I sent you. Yeah, I'm looking for it right now. Okay.

Welcome to LexisNexis. It's not an email, is it? Yeah, pretty sure I sent it in there. Okay.

Let's see. This is plusai.lexis.com. Yeah, that's Lexis. Okay.

Let me pull it out. Let me search for Westlaw. One second.

Okay. Westlaw results. I don't see a login for Westlaw anywhere.

You don't need it. I sent you the printout. Hold on.

You mean the one that says depends lawyers and litigation draft pleadings complaints and answers something else from your list and the motions. This is not from Westlaw. This is from you.

No, hold on. Let me find it. Oh, I think this is supposed to be it.

Hold on. My package is condensed super combo. When Westlaw did it, they cheated and did it in reverse.

Yeah, because remember when I had the meeting with them, I gave them super combo condensed and that I gave it to both of them and the guy from LexisNexis sent me what they did right then and there and Westlaw. Oh, I forgot. So I wrote to them and I told them I need that.

So they waited a week and then they gave it to me. And I think what they did was he remembered that I told him it was a little weak. So I think he fudged it and made it a little bit stronger than it originally had been.

So basically, we're talking about outdoing Westlaw and LexisNexis for the research and getting the right authority of documents to back it up. Is that? Yep. OK, because they fuck up sending you things when you try to do it yourself on their sites, right? Westlaw, the stuff that Westlaw gave me is kind of weak.

It's more of an outline. So what date did I send that to you, Alan? One second. I'll tell you.

On the. I think I got it. You know, eight days ago, the 26th.

Yeah, I got it. You see, if you open up the document that they sent, which is entitled Westlaw Motion Draft, see it? Yeah, let me get back to that screen. Westlaw Motion Draft.

Yeah. All right. You see what they sent here, right? This is what Westlaw does.

And this guy absolutely cheated because he wrote in there. Look at the inconsistencies in John Logato's declaration. Highlight the following points.

He wrote all of that in and he got this is that what that was the query. If you go to page two, this is actually supposed to be the paperwork going back. And it's kind of barren.

It just gives the main points. There's no body. There's no.

Yeah, I saw it. Now, if you go to the Lexus Nexus one, go to the one right next to it. Nexus AI assistant response.

Yeah, this is a 17 page document and it goes exactly the way a lawyer would do it. Introduction gives a little bit of what you're doing there and why this is going out. Statement of facts.

You need to give the court a rounding of what the case is about, why you're here, what you're arguing about. And it did a nice job. It was a little puffy.

But it still did a much better job than way better if you take a look at it. It looks much more professional, too. Right.

And my downside about this is you have to go to page six before you're getting any kind of water into it. If you go down, you go down to page six and now all of a sudden you see your first case is popping up. Yeah.

And there's not a lot of them, so it's kind of weak and kind of fluffy. I mean, it doesn't have to be loaded with shit, but you want you want it to be representative of you want to have a sufficient amount of case law in the back of the points that you're making. Yeah, I see what you're saying.

Sorry. No, like I said, the bottom line here is lawyers are lazy bastards. And the other point of this is for most lawyers, the more shit you can get done, the more you can charge.

Yeah. And if I have 42 cases that I need to deal with today, if I can have a computer run through, rip through shit and spit out 42 things, I'm billing for 42 things in a day, regardless of what my time is. This is all going to be billed as as legal time.

There's not going to be any distinction to, you know, oh, the computer did it. I did it. No, I'm in charge of the computer.

I'm charging for it. Right. And I also told you one reason why lawyers love motions and go in the court is because when you're in a courtroom, generally lawyers package cases on the same day.

So when they show up in a courthouse, they're there on five, six, seven, eight cases, because when they leave the office at eight o'clock in the morning, the meter starts and the meter keeps going until they're back in the office and the clients of each one of those cases are getting paid for it, are paying for it. Yeah. So, yeah, I mean, do you give them a little bit of a break? You're paying travel.

Everybody's traveling. You've got to be somewhat realistic. Not every case you you can't bang every client out for eight hours if you're sitting in the courtroom for eight hours.

You've got to be somewhat. But. The more shit you can get done together in unison and you're not actually working on it, which frees you to do up whatever.

This is what's going to sell it and the more reliable the product that you get at the end of the day. Like right now, when I had the conversation with the Westlong guy and I told him, I said, your product is weak. His response to me was, well, you're a lawyer.

You're not going to want a machine to write over you. You're going to just want to use that as an outline. And I said to him flat out.

I said, no. I said, if I wanted an outline, I'd go get a horn book and use that. I said, you're asking me to pay a premium for something which is giving me outlines.

I said, come on. I said, I'm looking for something to take some of the load off of me so I could dump all this shit and get it out. And I'm not sitting here writing for eight hours a day when I could have something spit out in 11 minutes, go over it.

Now, the one thing I'm going to tell you, the Westlaw version that he did here that you have when he did in front of me, and this is a little bit different, but when he did it, it spit it out probably in under a minute. When Lexus was doing it and they were embarrassed about it when it started, they weren't expecting me to do what I did. But when I gave him what the page count on Super Combo, I think is about 97, 98 pages.

A, I wanted to see if it could actually handle something like that, because God knows most motions have a hell of a lot more pages than that. So you need to have something which is going to be able to rip through this. And, you know, handle it.

And like I said, they were a little embarrassed that it was taking so long. And I I don't flat out. I said, listen to me.

I don't care if this takes. The guy said it may take up to five minutes. And he immediately, you know, wanted to start talking.

I said to him before we even went off on the tangent, I said, I'm not worried about how long it takes. I'm worried about the product I get back. If I get a quality product and it takes 10 minutes, 15 minutes, I'm fine with it because there's no way I'm writing an entire paper in 15 minutes.

So like I said, this thing, I think it took about eight, nine minutes for it to finally grind through. But the product, the end product was leaps and bounds above what Westlaw was. Am I overflowing you with too much shit? No, not at all.

You know, listen to me. I have no problem doing this every night this week, if you want. If you want to stop now and grab what I have given you so far so you can think about it, formulate whatever other questions you have.

Tomorrow we can come back, start it all over at the same time. Well, what I was going to tell you is we're going to have to do this, not a hundred more times, but probably 10 more times over the next month. Listen to me.

I'm happy to do this as many times as you want. What I'd like to do is come there in person and do a little bit there. Where are you? Downstairs? Oh yeah, you're in the corner.

I know exactly where you are. Yeah, it's probably if I come, but it's probably better if I come to you just because of this, because, you know, working in asylums is not easy. You know what, the day you want to come see Scott.

Yeah, we'll do this too. If you want to do this a thousand times, I don't mind doing this a thousand times. Okay, that's great.

I mean, because yeah, what I need to do is go through everything you said and then figure some shit out. And what's the next thing I need from you? And how do I make this part work? And you know what I'm saying? I have to have some kind of order in which to, so my order now after this conversation is simple. You're going to search for stuff for a case.

You're going to search for all the supporting documents that are legit. I don't mean to interrupt you, but I need to, because this is an important point that I was thinking of. And I actually wrote it down somewhere to tell you when I was using, and this is why I remember I told you that I think, I think a, they used Claude, whatever Claude Anthropx thing.

I think they're running and that makes sense. I mean, because you have a company that has everything set up, utilize that, but utilize your own LLMs. The difference, and you should play with this, go on to Claude and type some fact pattern or whatever else and ask for a case.

Claude is magnificent at doing that. It understands what you're doing. It may cogitate a little bit, go, go, go, go.

But at the end of the thing, it comes back with something that may be bullshit, made up stuff in there, but at least it responds. And most of it, I think probably with these services, probably 10, 15%, 10%, maybe even a little bit less, it's been getting better. I think they're keying on that, is made up.

They make up a case, they make whatever. When I did the same thing in the LexisNexis version of it, LexisNexis repeatedly as I did it, I don't understand what you want. I don't understand what you want.

So whereas, you know, writing in almost simple, everyday language was a real problem for LexisNexis. So finally, what I did was I made it stupid. I, you know, I did it as if I were doing legal entry instead of it being able just to cogitate from what I wrote, it needed help.

So I didn't mean to interrupt you and now, sorry. No, that's okay. I mean, I'm going to process what you've told me today, come up with new questions for you, new order.

I'm sorry, that's where I was at, was I just want to make sure I have that first part correct today. You search, you're going to, you got a new case, whatever it is, you're going to search for cases related to that case. And come out with a summary based on authority, who's got the highest authority to give you their case.

Is that correct? It depends what I'm doing. So if I'm looking for a specific matter, I'm going to put that specific, in other words, a specific issue. If I'm looking for one specific issue, I'm going to put it in as succinctly as I can with as much facts as I can so that that machine, Westlaw, Lexus, whatever, can grab me what I need.

Okay. So one of the things I'm going to need from you is when you get a chance, email me exactly that. Like pick whatever matter you want and whatever you're going to tell it and all that kind of stuff.

And just send me an email with all that. Okay. But that's going to be a generic thing.

In other words, it's going to be, I mean, I can give you a specific case, you know, and give you that, but it should be whatever matter I'm looking at or anybody's looking at. So in other words, it doesn't make a difference what the issue is. This software should be able to grind through it and find me what it is I need.

So if I write something in everyday language, I need to find stoplight, traffic light was broken. Two people went through the thing, smashed into each other. Who is at fault? Right.

Going in different directions. Who's at fault? Your software, that's the issue I'm looking for. So your software, first question is to say, well, where are you? Are you in Queens County? You got to help me here, bro.

Queens County and whatever. As soon as that thing knows where it is, it knows what to look for. You've got to train it how to look.

So the first thing you're going to look obviously is to see if there's an appellate court of appeals decision. If not, drop down. You're going to drop down to second department.

If not, then you're going to drop down further. If you find something there, you know, then you can start giving cases on that basis. So that's the way it should look so that it's able to throw cases back to the person on those exact, you know, as close to that fact pattern as it can.

And you may not be able to do it, but this is going to have to be some of the intelligence in the machine to either ask the question to the person, does it have to be exact? What points can be varied? Because once it's chewing through it, it may say there were 10,000 cases here that come somewhat narrow it down a little bit, but yeah. All right. Well, still do me a favor.

Email me one, just so I have it. Yep. And then probably in a couple of days when I've got this stuff sort of listed out in the order that I need it, we'll do this again.

Yeah. Like I said, it's life is going to get a bit easier. A lot of the shit that I've had to do over the past month, the amount of ridiculously large things that I had to do today was the last one.

I got that thing filed at about 12. So life is going to slow down a little bit. Yeah.

Hopefully. Good. All right.

Well, thank you very much. I appreciate it. And either I'll see you this week or next week and we'll go to Scotty's.

Okay. Let me know when you want to do it. All right.

Sounds good. Thanks. Good night.

You too. Bye-bye. Bye-bye.

Where's the fucking end button?
