

video1409534139

There we go. There you go. All right.

No, but I don't see anything you're not sharing. No, I haven't shared it yet. I'm trying to work my way over to the window that I want.

Oh. That is the wrong one. Oh, they changed it.

Oh, okay. That is the right one. All right, let me share that screen.

Okay. They're going to make everything, like, stupid. Yeah, I know.

Zoom, they change, like, every fucking month. There we go. Can you see my screen? I can see your screen.

Okay. Now, in the past, Alan, this is what I would do. I would come to this page.

They've changed it quite a bit. Okay. I would go over here to, now, I'm looking at decisions that have come down, and I would search something along the line of, I'm going to do mechanics late.

I'm dealing with this stupid, what, 14-inch laptop. You can't see on it? No, but the keyboard is, like, mini. Oh, got it.

So you don't go to Westlaw first. You go here first. Well, Westlaw is what I use.

I'm going to show you what I have in Westlaw, and I'll show you what my current subscription is and what I use for that. But I come here, right? This is what I would do, and I would do this. Now, here right now, the way it's currently set up, I'll do Supreme Court commercial, and I'm going to search this.

Let me move this. I can't see the button. There it is.

And I would now get this. These are decisions that are handed down. This is going to be by the lower court, and what I would do is I would come through this, and I would try to find stuff like this.

I would get a decision, right? Now, these are actual decisions that are issued. Right now, we're in, and I got to move this again. We're in the Supreme Court of New York County, right? So New York County, Bronx.

Actually, I think the Bronx is second. New York County, Westchester are part of. Actually, the Bronx is part of the first department.

So we're at the bottom level here. We're at Supreme Court. But what I would do is I would come here, and I would look for these decisions, and in these decisions are cases that I could

potentially use for things.

On top of that, what I would do is I would grab the index number like here. The index number in this case is, and I'm going to write it down so I don't forget it. The index number here, 5351 of 2000, and this may be a case.

Actually, I want to find something a little bit later than this because this may not be one that's in. Did you just see that decision on the page? Yeah. Okay, all right.

So I'm going to go back here. I'm going to see if I can find something a little bit later. This one looks like it's a 2001.

Okay, the way they're currently doing it, this is the index number on it. So I'm going to look to see something later. I can't explain it.

Let's find this one. All right, it's not much there. But, again, what I would do is I would grab the index, and this one is 10248403.

Then I would go to here. Actually, I would use the other one, but I'm going to use this one here because I'll have better access to the cases. And I would do the index number.

I would pull it. So I'm going to do the first one, see what we get on there. Okay.

Yeah. New York County, they had their own system, and they didn't join up with the full state one for a while. Let me see if I can do this.

All right, that's not doing it. So let me try the other one. One second.

I'm going to show you. These cases that you're looking at here are my cases, right? So after I went to that website and I would look for whatever decision had what I needed, I would then come to the particular case here, right, and I would look up here. So I would come here, and now all of the documents that are filed in the case are now available here.

So if I saw, for example, if I saw that there was motion, and recently we had a motion in this case that was argued, this guy was talking about lien fund, about he wanted to dismiss my complaint, he wanted to do all types of stuff here, but it was surrounding mechanics liens. So if I was looking to prepare something, I would come back here, and I read from the previous court that this case surrounded mechanics lien. I would come here, and like I told you, this is a cornucopia of information.

If I was looking to actually write a summons and complaint for a mechanics lien, I could come here and pull all of this information. I got the summons. I got the verified complaint.

I could go through this and see what causes of action should be in a case revolving around mechanics lien, and you can see here I have five different causes of action. The first one is to

foreclose a mechanics lien. I have a second one for account stated.

I have another one. All these different things that I included in my complaint. So if I were looking to draft the complaint, I now know what's needed in a case revolving around mechanics lien.

If I am looking now at information regarding what needs to be included, I can see here that this person here included a legal description of the property that meets and bounds, which has to be included in it. I actually included all the mechanical liens filing, which included the mechanical lien itself, the affidavit of service, all of that stuff. It requires a notice of pendency be filed, which is here.

So I get to see everything that I need to do within a cause of action for mechanics lien. This is how I learned this stuff. You know, when you're coming out of law school, they teach you a lot of stuff, but most of it is useless.

You actually have to see it in operation. When all of this stuff went online, it was like opening up a whole new world. I used to spend a lot of time in the courthouses pulling files to see what I needed to do.

Now I have everything at my fingertips. So I'm able to go back and see all of this stuff. Now here, this is a motion that they filed, right? They filed a notice of motion, which is the lead document in it.

Sometimes people do it combined notice of motion, along with the actual motion papers. But this is seeking dismissal of the complaint in its entirety, and then seeking other portions of things. So this here now has all the information regarding what the motion is.

I'm thinking of something that I think I need to do on this. So anyway, you go back and now you can pull out the memorandum of law, which is in support. And when you look through this, you will have all these cases that are cited in here.

So this is like a beginning of where you need to go. So if I'm looking to do a motion of similar type, this guy already did a lot of the legwork. I'm able to pull it, go through it, make sure it matches what I need, and then file something that is appropriate to what my needs are.

And in here, you also have it written out. So if you needed to actually copy and paste or do whatever, you actually have things in here which can be utilized. This is why these documents, this is why I'm suggesting that the filings are really important, because there's a lot of information within the filings themselves.

A lot of people look at decisions that come out of the courts, and they're great. But this gives you access to more information, more detailed stuff, and a written guide, a map of what you need to do. So if you're in a pinch, you could pull some of this stuff.

You could actually utilize some of this stuff. You could use it as a roadmap to what you need to do. Okay.

So basically, when you pull one of these cases, you want to see every type of document that's associated with it, right? Pretty much. In other words, there are a lot of document, ancillary documents in here which are very little use. But things like affirmations and support and opposition, memorandum of law, these things are what are really important and what really need to be, like, watched and gotten, because these things are very helpful.

And especially if you get, like on this case, you have an affirmation and support, and then you pull the affirmation and opposition. If you read both of them, you can see where one guy makes arguments that you may not have thought of. Right.

It also is helpful because you're able to see where the stronger points are that you may have to change and make more pertinent for you. Okay. But let me ask you, I get what you're saying, but all the ancillary bullshit documents, you want to see those too, right? You want to be able to click on them if you have to.

Yeah, that would be great. Okay. So, and also for your purposes, look, ultimately what I'm thinking you're, and ultimately what lawyers want, and what these guys don't seem to understand, is even if you don't want AI to write the full document, you want AI to give you an outline of where you need to go, what you need to do, throw the facts in and have that thing, and chew it up so that you're getting a path, a guide, an outline at least.

And that's where a lot of these things fail. Claude, by far and away, is better at a lot of this stuff. I had the meeting with Westlaw and also with LexisNexis on this.

And I'll send you both of those things. You can see what they came up with. I gave them just the outline.

I'll even send you the, I'll send you the documents I gave them. Okay. I drafted, not drafted, I can put together a PDF.

And I said, these are all the pertinent documents. I need an affirmation in opposition. Now I already wrote mine, so I already had it.

And I wanted to see where they went. Westlaw was probably the lightest and probably not the best. The other one, LexisNexis did a much better job more in detail, but it was still kind of a little bit of fluff.

Claude probably came closest to doing what actually needed to be done, which I thought was really kind of interesting. Now, the interesting point is one thing that, and I can send you the link. Westlaw, and I'm assuming under contract with New York, is required to have a free side of case

law available.

So they have a link that you can do whatever, and you can put in the site, you can put in the case name, which is really weak to do it that way. But if you have a site, you can pull the as published version of Westlaw. Okay.

That's over here. Let me open up another window. Hopefully you can still see it.

Yeah, I can. That's this one here. You can do a word search on here.

So you could do, and you can search by court of appeals decisions. You can search by first, second, third, fourth department, or you can go below that. You can go to miscellaneous reports, which are lower course.

So I could do this. I could search. Now, I didn't do any connectors on this, so I'm going to get back.

See, it's not coming together. So in order to let me modify this, I'm going to do this with the quotes. See what we get.

This doesn't always work out well. All right. So now I'm able to do it here, and I'm able to pull up these cases and get this.

So this is how I would start, and I do this also. And here I've got this is the appellate docket number, and this one over here is the index number. So I can go back and do exactly what I just showed you before, pull everything up.

So this is also a good thing. But what I was talking about before is what I'm assuming your ultimate goal here is going to be to have artificial intelligence or something grind this shit up and do a little bit more than just find cases, but actually be able to produce documents, which, as I was telling you, they're still kind of weak on doing it, because I don't think these guys are actually doing it either effectively or doing it the right way. I don't know how they're getting the models for documents.

I don't know where they're pulling it. It's not really the models. It's the prompts that they're giving to get the output are weak.

That's usually the cause for that kind of stuff. All right. Well, then, but like I said, you know, I'm assuming that if a lot of these companies are producing their own AI and using wrappers around what's available, you could probably do the same.

I mean, I don't know what you're doing now. I don't know if you're doing that on a local machine or if you're doing that, you know, on whatever server you're utilizing. I'm using a virtual server.

Okay. Yes. Okay.

Doesn't matter. I mean, you know, that part of it makes no difference. But what I'm saying, though, is, in other words, if you're doing that just as a dump server with certain things set up just to go through and root out particular catchphrases or whatever else, that's one aspect of things.

But if you're going to have something grind up what's there and be able to spit out a logical answer to a query that's being made, that's a different animal. And that now you're looking at much more on the back end to be able to do that, much more computing power, much more everything. So the point is that if a lot of these companies are just utilizing chat or Claude as essentially their back end of things, and you could just wrap around.

So, in other words, if you could have some of your data available and mix it in with the computing power of some of these things, that makes sense. Well, let me tell you what I've done so far so you can just follow along as far as where we're at. Right now I'm not using AI for anything.

Okay? So I just built an app that goes, grabs the data from the court systems that you gave me, New York State, whatever, all the four departments or whatever the hell it is. And then it takes that data and it runs it through a parser. And it says, okay, this matches mechanics lean.

And it's got this many documents attached to it in this many cases and blah, blah, blah, blah, blah, blah, whatever. So that's kind of version one is grab everything, have it available to then hand to AI, which I've already started writing the proper prompts, excuse me, and spit out what you're talking about as far as outlines or briefs or whatever. So what I really need, and I guess some of these emails that you're going to send me are going to help, is I want to get, we need to get the search perfect first, not perfect, but good enough.

You know what I mean? So that then we can apply AI to it. Because if you do everything on AI, you're spending so much money. It's not enough.

Well, and a lot of this, I mean, a lot of what AI does is unnecessary. Yes. They waste a lot of time and effort doing things, which are essentially stupid, dumb things.

Right, which I'm doing with Python scripts. I mean, it's pretty simple. But like I said, as long as you get the gist of what is being done and how it needs to be done, you know, how it needs to be accomplished, you're gold.

Well, first I need to get you to tell me if the search part is showing you everything that you would need. And then once I have that locked down, then I can run them against the AI prompts and get the stuff that you need spit out properly. And then obviously you check that too.

And then at that point, we have something. You know what I mean? Yeah, the point is, in other words, and probably another way to do this would be the number of times you come across a particular case. So the volume of times that the case is cited would indicate its importance.

Yeah, I'm already taking that into account. Yeah. So when you see there are cases for the court of appeals that are repeated over and over and over again.

Yes. There are cases for the second, first circuits, which are repeated over and over again. So the way to do that would be motion to dismiss.

And then the number of times cases are cited. So with each cause of action. And again, there is a cause of action.

And then beneath the cause of action is what's starting the case. I'm suing you for because you breached the contract with me. And then underneath that, there are motions to dismiss cause of action, breach of contract.

Or because a lot of times a motion to dismiss isn't dependent on the cause of action, but it's just a motion to dismiss. And what are the reasons why? You know, the complaint fails to state a claim. Everything related to law is basically a flow chart.

Yeah. So you have the initiating document, which is the complaint. What's in the complaint? Causes of action.

Causes of action for A, B, C, and D. And then that document gets compartmentalized. And then the follow-up is motion to dismiss. What are you looking to dismiss? Cause of action one, two, three, four, or cause of action for breach of contract for this, that, and the other thing.

Then from there, why should that cause of action be dismissed? Well, it fails to state a claim, which is a reason for dismissal. In other words, the elements of breach of contract haven't been cited. What are the elements of breach of contract? A, a valid contract, understanding between the parties, and all of those things.

And then once you got everything there, you're gold. And on the other flip side of that is, before you're actually able to put together the complaint, you need to know what the way to put together that, what you need or should be in that complaint. So if you have a complaint for a cause of action being breach of contract, generally you need to attach the contract.

Plus whatever ancillary documents that prove the contract is in existence to a point. And mechanics lien, what do I need to attach to a mechanics lien? And that can be called from, as you're going through the checklist, as the machine is calling each one of those complaints, it looks to see what's attached to it as an exhibit. So from that information, you'll be able to call breach of contract claim requires copy of the contract, you know, checks or whatever else might be generally attached.

So you're building a database on creating the actual complaint. And then you could also do the same thing with answering the complaint because sometimes there's not a motion, but there's an

answer and what needs to be done. That's generally more or less wrote, but you could also add in what are the defenses to a contract.

Again, usually wrote. Guys put everything in the kitchen sink into it. Yeah.

But that's where, you know, that's where you go from there. Well, I forgot the best way to say this. I'm going to brain fart.

Okay. When you start your search, the way you showed me earlier, you're starting on searching on previous cases, right? Yes. Okay.

So a lot of guys, Alan, a lot of guys. I'm going to show you. I'm going to take you into Westlaw to show you what I have in Westlaw and what I generally utilize Westlaw for.

Let me get there. Okay. This is my current Westlaw subscription, what I have.

And by the way, one other thing I wanted to point out from the AI standpoint, the cheapest version of the AI. Hold on. I lost you for a second.

Let me just see where you went. I'm searching right now. Oh, there you are.

Okay. I got you. Sorry.

The cheapest amount for the AI bullshit that Westlaw is offering is about 535 bucks a month for me alone. Single attorney. Yep.

LexisNexis is almost 600. And I'm going to show you, I'm going to email you the results of what the result was with the two questions. Hold on.

I'm going to take you to the actual. Now, ordinarily when I'm on here, what I'm doing here is I'm throwing documents into here. And I'll open this up.

Quick check. And I'll do check my work. And I will take, I don't know if I have anything on here.

Let me see what I got on here. Hold on a second. I'm going to throw a document on here.

I don't actually, I already have one. That wouldn't help. I thought I plugged myself in.

What do you mean? I hadn't plugged myself in. To what? A laptop. Okay.

Yeah. I got to tell you, I have gotten so spoiled to having multiple monitors. Can you see what I'm doing? Yeah.

Okay. So I dragged my document. I dump it into here.

Yep. It reads it. And what is this document? Is this a case? This is my reply, my affirmation in

opposition.

So I wrote it. I want to check the cases. This is what it's doing.

It's checking cases for me here. It's looking at my case to make sure that, you know, my cases that I've cited are still good case law. And this is important because if you cite a document, which is bad, you're fucked.

Yeah. So Westlaw does it with their own system. I don't know how they do it.

LexisNexis has Shepherds. And Shepherds is, Shepherdization has been an industry standard for years and years. So this thing, when it's done, is going to produce a document.

It'll pop it up. It'll have all the cases that are cited in there, and I can do this, see it in a number of different ways. And this is the table authorities in the case.

Any cases which have an issue or might have an issue, if it's been overturned, it'll pop up red. If it's showing yellow, it means that there's some issue, usually something stupid. But you can go through and see each one of the cases.

You can also do this with your opponent's paperwork. Dump it in. It'll run through, pull all of the cases, and you can see anything that might have been overturned in what they're citing or if there are any issues.

And what I do here is when I get this, I have all of these cases. I pull them all so I'm able to read them over in depth of my opponent to make sure the case they cited is on point and that it says what it's supposed to. This thing will also take a look at the way I quoted it, and if there are any differences, it'll point it out.

You know, this doesn't have a comma, the word afford, whatever. And sometimes I truncate cases or quotes, or sometimes I don't do that. I just give a rough quote, and then I write C, the case name, because that's not an actual quote.

As long as it's not within quotation marks, I'm able to take liberty and do what I need to do. Okay. So this is where we are.

Now, as far as doing legal research on here, you come here and you can supposedly, and we'll see what this spits up. See, now this is going to give you case law. I think doing it the other way where you actually have the example of what's filed is far better because you actually see what's been done before.

And the other thing that I was telling you, right, when I find a case, there we go. Please go away. I'm going to go back to my cases.

Now, I come up here, and also available on a lot of these cases are the law firms that are

representing. Now, this law firm is notorious for being super aggressive when this Hanum-Ferutic-Pendergast. I've dealt with them on a number of cases.

Sometimes as defendant co-counsel, we're counsel on, you know, they represent one defendant. So I've gotten the opportunity to see these guys. But before I ran across them on the same case as a lawyer, going through some of the documents, I realized that this firm is very aggressive at doing things, and they have very good paperwork.

So what I've done in the past is instead of looking at particular cases directly, knowing... Huh? You've copied their shit. 100%. Now, I can do that here to an extent.

I'm pretty sure I can. Let me do case search. Do it by name.

And by the way, what you're looking at here is on the lawyer side of things. This is a closed system for the lawyers. Because on this thing, I actually file all of my paperwork on here.

Well, this is not generally the one I use. I do it on it. But on this case, on this side here, this is what I actually file to.

I come on here, and New York State has one of the... This is probably the best system anywhere. All of the filings are available with the exception of ones that are sealed. But everything is on here.

You can see everything that's been filed to a particular case. It's great, and the filing system is great. There is no fee to use this.

The federal system pays for it. They charge you to use it, which is a pain in the ass. Here are my appeals.

My Costco case has not been decided yet. But what I'll do is on this side of things, I will go to... No, this isn't it. Hold on.

Here, and I will do the attorney search over here. I will do this, generally ask for... I can do open. I'll get the fresher ones.

Now I get their full breakdown of all the cases this firm is on. And on here, I can see if they're representing a plaintiff. I know I can grab a complaint because I know it's going to be well done.

And then if they're on the defense side, I know I can look for information, which is going to help me out on the defendant side. Okay. So that's why looking for being able to search for attorneys is also helpful.

It's interesting. That's one that we don't have in the system yet. Yeah.

Like I said, if you can find a particular firm that does something and does it particularly well, that

could be a great help to you, either helping defend something or helping to prosecute something. That can really give you, again, a further framework or map to how to do what you're trying to do. In law firms, they have a slogan.

You watch one, you do one, and then you teach one. So you watch somebody else do something, then you're able to do it yourself, supposedly, not always, and then you're able to teach somebody else how to do it. And that's what this is.

It's the watch one, do one, teach one method. And I'm a firm believer in stealing as much as I possibly can. That I know already, yeah.

Well, it's helpful. Yeah, I get it. You know, I'm also firmly a great believer of stealing, whatever.

Yeah, I know. Let me ask you a question. How many, is it three or four different websites you just had to go to to show me all this? I think it was four, right? Well, the first one I took you to was in New York State, New York State Court Electronic Filing System.

Yep. And I took you to the attorney side of it. You can go to the non-attorney side of it.

I've been there, yeah, I know. Okay. This is the Supreme Court website.

This is the Supreme Court search website. In this, you can go to eCourts Home, and lo and behold, you've got, and they're just building each one of these up. This is for the civil courts in New York State.

So you're able to, they're slowly adding to this and see decisions and everything else in the lower courts. Criminal side of things, there's not a whole lot on there. You can go on there, web criminal, and you can search by a person's name and see if they're, but other than, Oh, God.

He died. Yeah, he told me. You can search for a particular name and see if there is a case and just basically get a very basic version of what there is.

You know, the charges and the outline of the charges and the next appearance and what court. Very little information is available on this side. Well, I haven't spoken with anybody on the criminal bar, so I don't know if they file documents here or where they do file documents.

I haven't been on a criminal case in forever, so I don't really know. Okay. The reason I asked you the number of pages, I mean, number of sites, is because if we could combine them all into one site with all the information available in a logical way, that would be a big deal, right? Yeah.

If you can have all of this information that you're, well, I mean, Alan, in reality, and I think I showed you this once before, but on, hopefully that stayed in cache. Okay. If you go to this case here, right? I pulled this case up.

This is a 14. Let me get something older. Okay.

This will definitely, I look at the case here and this on the Supreme Court website, you come down, you see all of the parties involved. Right. Right.

Then if you come down here, you can see individual appearances that are made. These are court dates. Not super important.

You can see individual motions that have been made. Again, not particularly important, but at least you see what the motion is for. Right.

Summary judgment, summary judgment. Renew, re-argue, resettle, reconsider. Summary judgment, summary judgment.

Amend, caption, pleadings. Or to dismiss. So you can see what the actual relief is and you can, that'll help you that way.

But you come over here and now you've got every single document that has been filed in the case available here. And what I've been doing is there is an extension that I can put on. I utilize Brave, which is everything is offshoot these days of Chrome, one way or the other.

But it's available on a lot of browsers and I will just rip every document off here all at once. Yeah. And then I just package it and hold on to it and go back as I need it.

Okay. So this website and the CEF website, the court electronic filing system, they're basically the same. They basically have the same information, just rearranged slightly differently.

This one actually has a little bit less of it. On this, if the member of the public is looking for a case and a motion hasn't been filed, nothing will pop up yet on it. It'll pop up empty.

Okay. But yes, if you could rip or have all of the information available from each one of these websites, it would be really helpful. Again, in the way I do things.

And I do things, one of the reasons why I do this is because I couldn't afford 1,000, 15,000 a month on all this stuff. So I had to adapt on the fly to being able to get the information I needed as quickly and as easily as possible. Well, let me ask you a question.

Would you consider the research part, all the information and the generate documents with AI, two different things, or would they have to be together in order to launch our site? I think they're going to have to be together. You could probably segregate them. Right now, I'm telling you, in years, and it's already here more or less, but Westlaw and Nexus are still doing just information.

I'm going to come out of this screen share. Okay. Westlaw and both of them are still segregating things right now, but they're getting closer and closer to pulling everything together, so there's no

longer going to be a separation of AI and just information services any longer.

And they're doing that because there are too many websites, too many lawyers are utilizing what's available for free or on the cheap. The way they're trying to get around it, Westlaw has had a lot of competition, and there were a lot of websites that were offering data and data alone and doing it really, really cheap, \$100 a month, \$50 a month, and all they were doing was aggregating everything the way you're trying to do it, had it all available, because a decision published by the court system may have a copyright to some degree, but it's government information, and it's open. It has to be.

So it probably comes with, if it does, I don't even know if it does, just accreditation as to where it came from, but I don't think they can withhold it or turn around and have any kind of bar on somebody actually utilizing that information. Okay, so from what I'm understanding, from what you're saying, is that just a research product alone is not worth it because that already exists, right? Well, again, if you hear what I'm telling you, right now, what Westlaw did in order to do away with these things was they started buying them. So all of these cheap companies, Westlaw fixed that by buying them and tucking them into Westlaw.

So now, instead of being \$50 or \$100 a month, now you're looking at the Westlaw side of things. The cheapest package right now, and I have just data. I have also what you'll see.

It'll look at something, and it'll just give me the data. It's not doing jack on the AI side. So what I have is just a strictly data plan, and it's costing me almost \$400 a month.

So if you're able just to aggregate the data and make data available for a lower amount, that would be probably interesting to a segment of the legal population. But what I'm also, because what I'm telling you, even though Westlaw currently has a data-only side, eventually that's going to go away. They're not going to be able... In order to make it work for them and make sense for them, they're going to have to combine everything.

So you're not going to only be able to get the data side. You're going to have to get some AI package mixed with data. It's going to happen.

It's coming. No, no, I understand that. But I guess what I'm asking you is, is it worth launching something that's only data at the moment with AI coming, or is it better to have them combined and launched that way and really, you know, stir the shit? Well, let me ask you this.

Yeah. Putting together a package or a program or something that's just data alone with the promise of AI rolling down the pike, if you were to do that, does it cost any more to do something along that line and just put out a product? Well, this is the data product for now. Does that encumber you in any way, cost more? No, it doesn't.

But my thing is coming from, you know, internet marketing, whatever you want to call it, is if you

just put out the same shit that people can get now at a slightly cheaper price, yeah, you'll get some customers, but it's not a big deal. But if we combine them first before we release, then it becomes a much bigger deal. And what I would suggest to you is combine, then release.

Okay. So then in order to do that, I mean, I'm going to look at everything that you email me or whatever today, but can you pull up a server death on your screen for a second? Pull up what? Oh, your thing? Yeah. Okay.

I didn't cut you off. Good. Hold on.

I'm getting it. What's the web address? Serverdeath.com. Or did I make it death server? No, I think I did server death. I can't see shit on the screen, by the way.

I don't know if you stopped sharing. No, I stopped sharing it. I told you I was going to.

S-E-R-V-E-R-D-E-A-T-H.com? Yeah. I'm on a lander page, and it's not showing anything. Then it's the other way around.

Deathserver.com. Right. I have so many domains with the word death, and then I forget. Yeah, it's popping up blank, too.

Let me... Hold on. It's impossible to... One second. Let me go look for your email and link to that.

Hold on a second. I'll give it to you right now. Okay.

Yeah, it's serverdeath. Let me paste this into our little chat here. Chat.

Got that? Okay. Now I got it. Okay.

Can you show your screen now? Hold on. Okay. Okay.

So this is obviously just the data part, right? Yep. But try one of those terms or whatever. Those are some of the terms you gave me.

Okay. Well, of course. So what I did was, since the last time I showed it to you, it was showing you a whole bunch of cases related to it below it? Mm-hmm.

Other than that first one you're looking at? You know what? Let me change it to the one that I did last time so there's more cases. Okay. Yeah, I only have, like, 50 cases or something in the database at the moment.

Here we go. Okay. So you see, like, the similar cases? Yep.

So that's kind of where I'm at. Let me ask you this. What's the similarity percentage there? The similarity is a combination of whether it's the same court, the same judge, the same outcome.

I'll send you the list and you can adjust it, but it's basically, you know, it takes a bunch of variables and says, okay, they're the same. You know, this is the score. It's lower, it's lower, it's whatever.

Yeah, I took down the original PDFs just because. Big deal. What? Not a big deal.

No, I'm just saying it's just wasting money loading PDFs like crazy, you know. I have all the PDFs. I just got to load them.

Yeah, and let me ask you this. For purposes of what you're trying to do, if you're going to, can you refer back to other sites to have it pull it off of those sites instead of you hosting that stuff? Why would I want to do that? I don't know. I mean, if it's cheaper and you're not banging your own servers or doing whatever.

This is pretty cheap to do, John, this part of it. This is nothing. This is, I mean, it's on a VPS so you can see it, and that's the only reason.

Like all the code and stuff is running locally. Okay, so I see below it here you're giving the same court, same motion, same outcome. Right.

You know, that's actually kind of helpful. Well, you're the one that told me to do that. I gave you the colors.

Nice. But I guess what I'm asking is when I perfect this to grab everything from everywhere and use all the terms that you want to search for, then I can add the AI output for it and release it that way instead of just like what you're seeing here, which obviously would be much prettier and whatever and all that shit. But, you know, don't go by the UI right now, you know? Does that make sense? The UI, this UI actually isn't bad.

It's a lot quicker than the other guys. I know that. Yeah, and it gives you a breakdown of essentially what you're looking for.

It's clear. Yeah. I like it, you know? I mean, you've improved it quite a bit from the first go.

Yeah. But, yeah, if you could combine, like I said, if you can combine the best of both worlds into one and do it at a reasonable price, I think you would have something. I'm telling you, you've got to read.

There's a Reddit page where people who are involved in this on behalf of law firms and you read what some of these guys are getting charged per seat in some of these firms. It's astonishing. Can you send me that Reddit page also when you email me? Yes.

All right. Cool. Okay, so the decision seems fairly simple from my point of view.

We have to have the AI part in this to release it. So what I'm really going to need from you, other

than whatever you're emailing me today, is, oh, actually, I think you mentioned it. The outline of what you're giving and getting from Westlaw.

Yeah, I'm going to do that right now. I was just going to jump on. I was going to show you what they gave me.

And I got to tell you this before I send it to you. The Westlaw one, I had asked the guy to send over the initial one because I did the meeting with him and we were having a meeting and I told him, I said, I'm going to send you paperwork. I said, I want your system, your AI, to draft an affirmation in opposition to this paperwork.

And I gave him, and I'm going to send you the exact same thing. I sent him my complaint, the motion papers, and all the attachments, all the exhibits. And I told him I want an affirmation.

And it did it reasonably quickly. It did it probably in under two minutes. But the original one was really underwhelming.

And I looked at it. There's a declaration that was included in the moving paperwork that was really, really bad in a lot of different ways. And the original GO barely mentioned that declaration.

And I said to him, I said, I noticed your paperwork didn't include or attack any of the declaration. Oh, well, what do you want to know about it? So I told them what I was looking for and they redid it. And they gave me just specifics on it.

But I noticed it hadn't been included in the first GO. So they never sent it to me. And I sent the guy an email.

I said, hey, by the way, I said, you were supposed to send me this stuff. You never did. So he says to me, he says, well, everything that we upload during a session automatically gets deleted.

So I said, that's fine. I said, I'll resend it to you and send me this. So I think they utilized it to tweak it a bit.

Because they definitely record everything. Absolutely. So I think he tweaked it.

So it's still a little bit weak. That's on the Westlaw side. The interesting thing is on the LexisNexis side.

I caught him flat footed. I said, by the way, I have this. This is what I want.

I want to see your thing. Because he was going to show me stuff and dazzle me. And I said, this is real world.

I said, I already filed this paperwork. I want to see what your thing will do. So I sent it to him.

He says, well, this may take upwards of five minutes. I said, that's fine. So he's having a conversation with me talking about, hey, who do you like in football, baseball? Literally took 15 minutes for it to finally answer.

That's on the LexisNexis side. So I'm going to send you that. Also, I'm going to send you what I think I kept them.

I may not be able to grab them today. It may be on the machine at work. But what Claude did and also what ChatGPT did.

So you can see. And I did all of that with the same package. So you can see what did what and what did well.

So let me do that. So I'm going to send you the cases. What else do you need? The website.

Cases, the websites, basically all the search terms that you would use. You won't remember all of them, but most of them anyway. Can I send you those? You sent me some search terms, but they were like 10 of them.

All right. You're going to have to give me some time then to accumulate, because what I want to do is I want to do it in kind of compartmentalized. Yeah, that's perfect if you could do it that way, because that's working.

You're going to have to give me a couple of days to work on that. There was something else you asked for that I was going to send you. Probably the exact flow that you use, not like with circles by hand and stuff.

But, you know, I go here. I go here. You know, type it out if you could.

Yeah. Okay. Again, I'll get that to you in a day or two.

But let me get you the immediate crap first, and then I'll work on the rest. That would be great. And how many attorneys do you think are out there, aside from the bigger firms or whatever, that would use something like this when it's complete? One of the reasons, Alan, one of the reasons why I need to do this, I think I need to start incorporating AI, is because I am seeing paperwork that is clearly not written by humans any longer.

Yeah. What I'm seeing is stuff which is diving into the darkest reaches of case law and pulling out stupid shit that I would never in a million years have been able to find or do. Right.

Ordinarily, in cases, you have the rote stuff, which is, you know, standard. And then you have stuff that you get firms that deal and do with this stuff day in, day out. There are law firms that just do mechanics lien stuff, and they read everything that comes out.

So they're really well adept at doing things. So that's why you look at cases that they're dealing with, but they pick up on minuscule things and start adding them. Everybody's starting to do it, and it's becoming clearer.

So I'm beginning to fall behind, and I can't afford to. Right. So I need to do this as a defensive measure just to keep up.

So I think this is kind of like incorporating the computer into a legal practice. At first, there were lawyers who didn't want any part of it, but it becomes indispensable. If you don't have it, you're fucked.

And this is going to happen with incredible speed. I think within the next five years, I think every law office is going to be spitting out shit that's done by AI to one degree or another. I'll tell you something.

It's going to be a lot faster than that, which is why I'm curious on how many possible clients we would have for this. Well, I'm just telling you. There's one lawyer I deal with.

He's a single guy. He's taken it a step further. He actually hired a lawyer to write his stuff for him, and that lawyer is utilizing AI to write his stuff for him.

Oh, you told me about him. Yeah. He's not even telling him that he's doing that.

I mean, I'm sure this guy Joe is smart enough to realize that there isn't a human being alive who is able to sit down and spit out a 20-page paper in two hours without some kind of assistance. So it's there. We're already there.

Yeah, in every industry, not just attorneys. Yeah. I mean, look, I cannot possibly be an expert in every single field.

It's impossible. So you need help, and you need the ability to pick out things. With a contract, for example, I could sit here.

They get contracts that are 70, 80, 90, 100, sometimes 150. I've actually seen them come back 270-page contracts. I need you to go through this ASAP, and that's freaking impossible.

I mean, I could do it in a couple of days. You've got to read through this stuff. If you can throw it into a machine that's able to rip it apart within a matter of 5, 10 minutes and give you the important points with some intelligence, you're way ahead of the game.

And I told you what I do is I don't stop at the one. I utilize three of them, four of them to look at it, go through it, pull it. Well, I think I had told you this stuff.

When I do generate one, I've done a few tests with AI to see what it would come out with. I

basically run it through all of them to kind of finish and put together what's missing from one from the other. You know what I mean? Yep.

Yeah, I mean, I've actually, on this particular motion, I actually threw together my paperwork and the three that I used, and I said to it, combine this into one. Right. Picking the most important points.

So my biggest problem on this motion, even on the version that I drafted, was just culling the amount. We're limited. We have, we're able, on a complaint, we can go pretty much as far as we want.

On a affirmation in opposition, we're limited to 7,000 words. Okay. So there are reasonably strict guidelines.

I mean, I could always make a motion or ask the court for leave for more room and tell them I can't possibly do it. Right. You know, his motion is 800 pages.

I need, and most times they'll do it without a problem, but yeah. But like I said, if you see a lawyer, they're going to be looking for something that's going to help them. Okay.

So I think you're going to open up the attorney directory for the state of New York and it's going to be there. Okay. But you've got to, I mean, the interesting thing, when all of this stuff first started, and this is like a year or two ago, everybody was running around, you know, heralding the praises of Harvey and some of the other ones, and you read some of these things about some of these sites and they get decimated by the people actually using them.

Well, yeah, because if they're using older models too, they suck. So, and a lot of people don't want to pay for the newer models because they're too expensive. But if you have revenue coming in, you know what I'm saying, then you're always on the latest, greatest models and your shit's on point.

All right. Let me get this stuff to you and then we'll talk later. All right.

Sounds good. Thank you very much. You're welcome.

Have a good one. All right, man. I'll talk to you later.

Thanks. Bye-bye.
